

# Project Theme

## E-Commerce Website

### Description:-

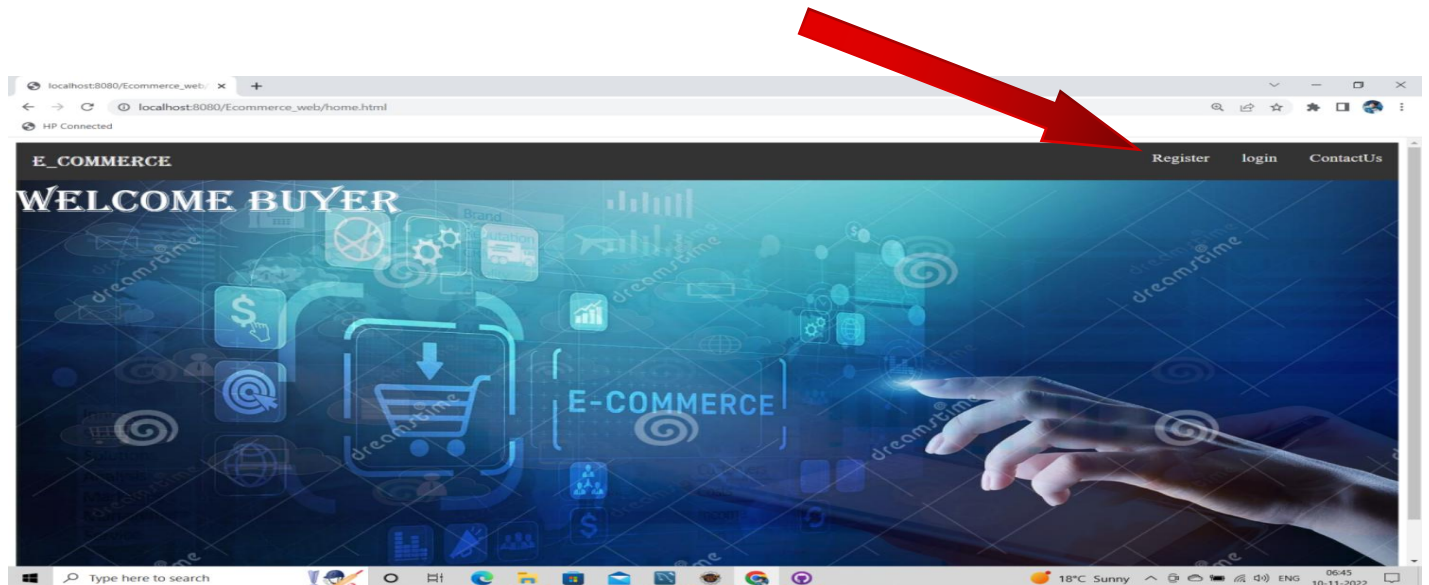

E-Commerce is a growing sector of our world which plays an important role in making people's life easy.

I have tried to implement concepts related to HTML, CSS, JAVASCRIPT, JAVA & SQL.

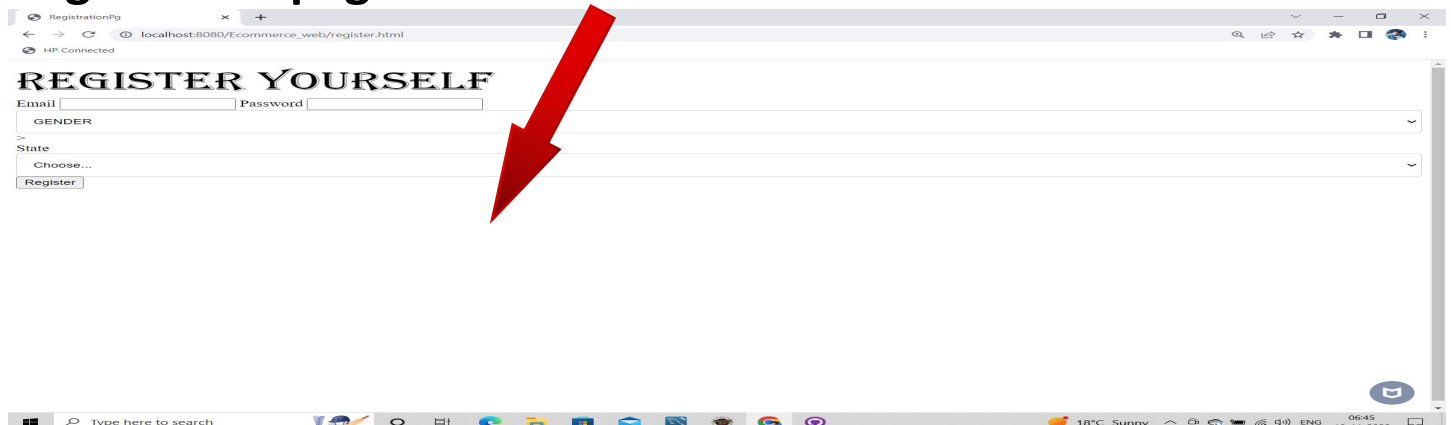

### Screenshots:-

This is the first page of the website where you can see a navigation bar is available along with register and login links.

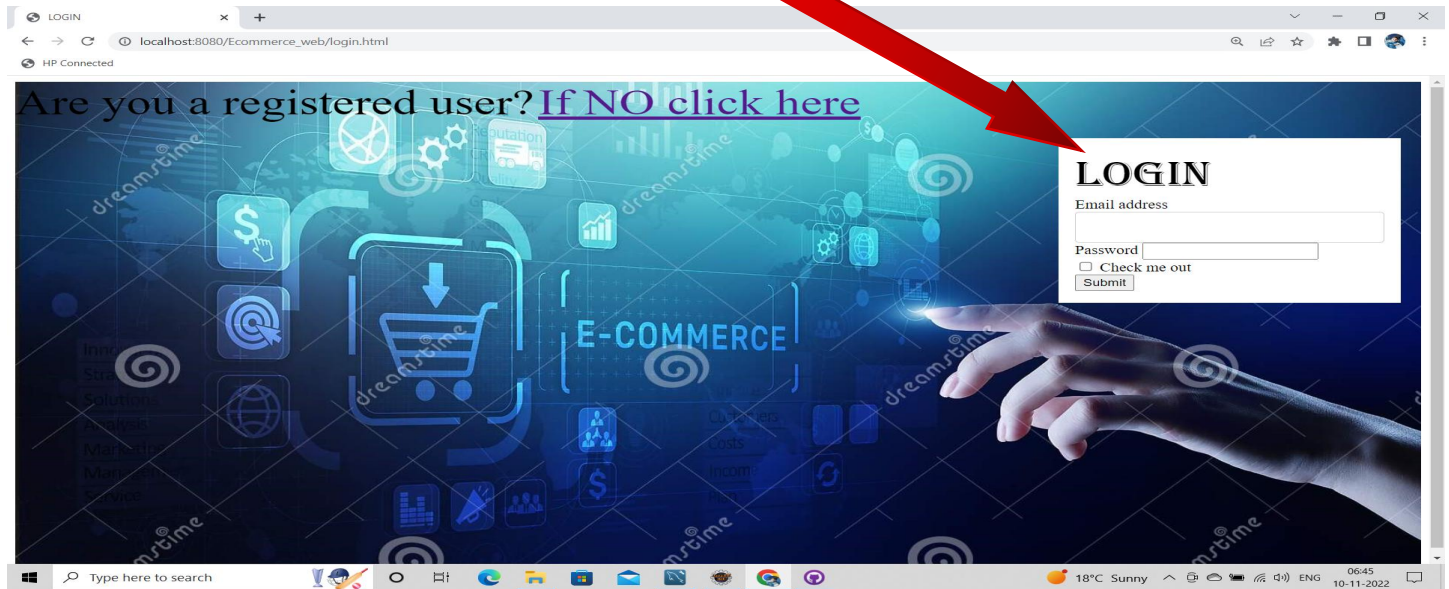

1) First of all, a user must register himself by clicking on the register button.

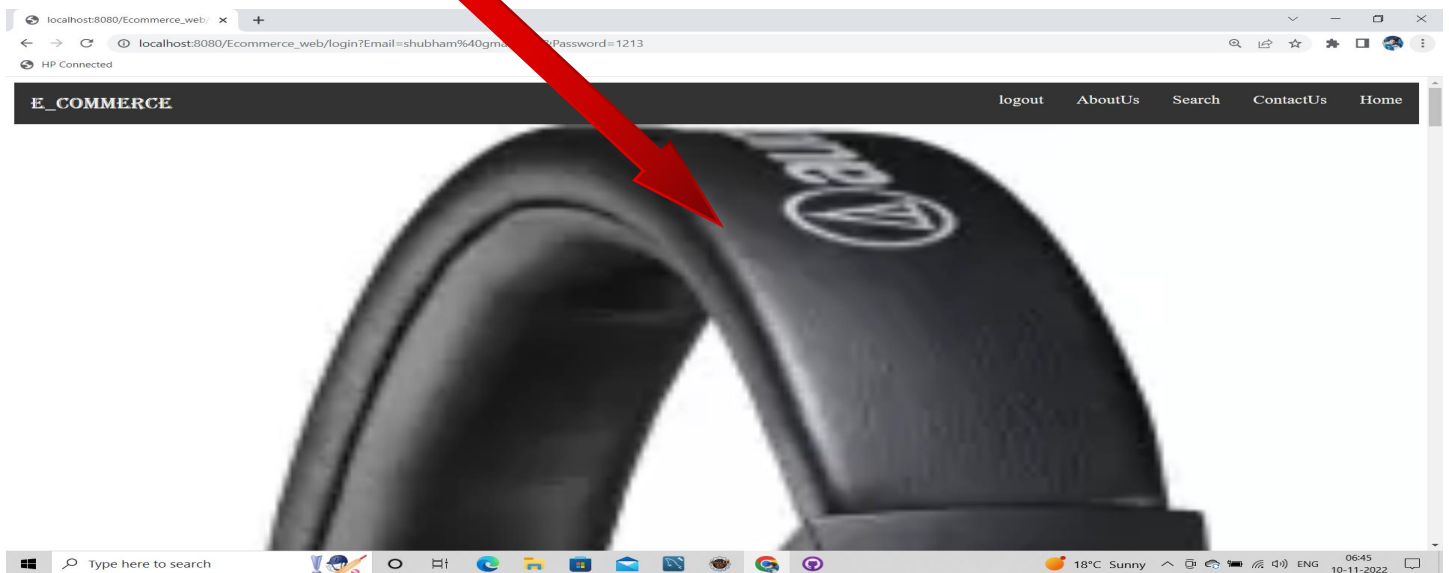

### Registration page screenshot

2) After registration done successfully user should login with the email and password which he/she had given at the time of registration

3) Now after successfully login user will reach to shopping page from where he/she can buy whatever they like.

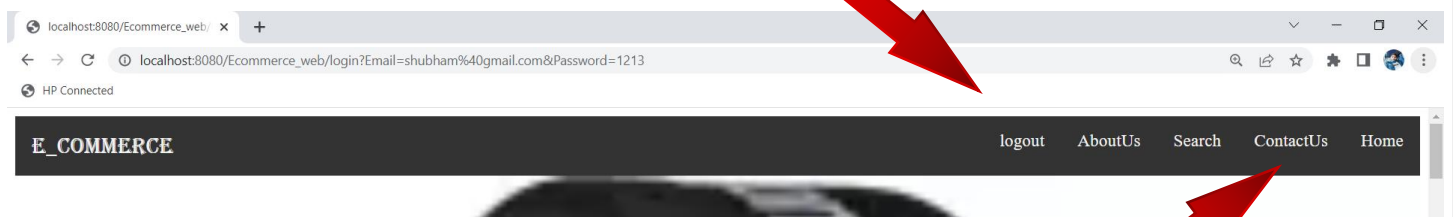

As you saw in the above screenshot this is after user successfully login .

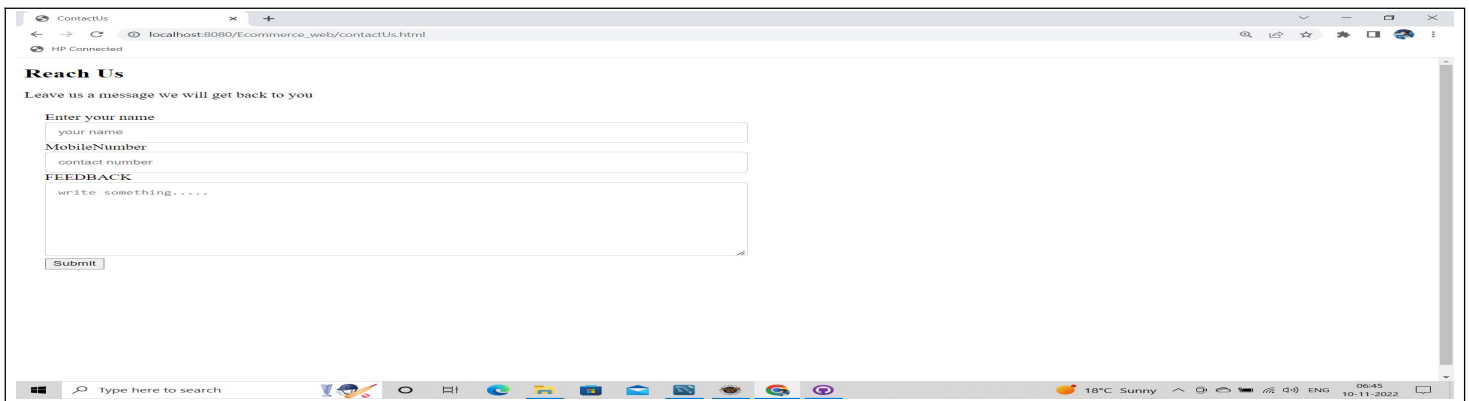

Above Screenshot is from the shopping page.

4) Now after buying products user can logout from his/her account by simply clicking on the logout button available in the navigation bar.

5) Now if user wants to contact us then by providing his details in the contactUs page, he/she can connect to us.

Above shown screenshot is from contact us page where user provide his/her details to contact.
